

TTT Tapping-Torque-Testsystem

Technical Series of Laboratory Measurements of Lubricants by Customer's Order

Performance

Issued are two measurement series with ten measurements in total for each lubricant (including protection against the so called "carry-over-effect or spill-over-effect"). Comparative evaluations of defined measurements are realized by means of the new **PC-Screening & Analysis-Software WinPCA3**, provisioning all laboratory equipment. With the **Analyzer** an individual evaluation of the various single and series of measurement-results including their flexible differentiation is ensued

The various liquids are anonymized with letters as A / B / C etc. Customer's data as well as identified results will be treated as confidential

Original measurement data are sent to the customer via data-file and may be further analyzed by means of Win**PCA_TRIAL** - 30 days test version free of cost. Telephone support upon consultation is ensured

WinPCA_TRIAL Download

Send an Email to support@microtap.de, and you will get the password and key for to download the 30-day-free-of-charge-Software

Measuring-Equipment

When provisioning TTT-test materials and measurement tools customer accepts price list of microtap GmbH for each part

Credit if buying a TTTsystem

If the TTTsystem will be ordered within 90 days after invoicing the required lubricant direction we credit the full bill

Price

For each lubricant **450 €** / net
Payment in advance

Conditions

Delivery as agreed upon consultation

Execution

To be provided

- Labeled sample bottles, max. 50 ml
- Statements to liquid resp. mixture ratio of emulsion etc.
- Reference liquide
- Information of your topics / goals
